

Guru.Anveshi.ai for tutors — getting your students started

For: any tutor bringing their students to Guru · Date: 10 October 2026, updated 12 October 2026

Prepare. Practice. Review. Repeat.

Let the Guru Chakra guide you on the path of eternal learning.

What Guru does for you and your students

You bring your students. Guru meets each one where they are. Upload the tests they have already taken, and Guru shows you where every student stands: what is solid, and what keeps getting missed. From then on, every guide and every two-minute video lesson is written for that student's grade, and gives extra care to the ideas they find hard.

Your students never log in and never talk to an AI. You hold the account, you see everything Guru makes, and you steer each student's learning along the paths Guru designs. Every guide carries the Guru Seal: independently checked by multiple AI systems before it reaches you.

Before you start

- A computer or phone with the students' past tests at hand: PDFs, photos of the pages, or screen recordings.
- Your students' names and their grade or class.

Step 1 — Create your account

- Go to **guru.anveshi.ai/tutor** and sign up with your email address. Use your own: you are the account holder.
- Your first 3 guides are free, with no card. You will see your balance at the top of every page.
- If we've arranged guides for you, sign up with the email address we wrote to, so they find you.

Step 2 — Add your students, with their grade

- Open **Dashboard**, then **Review a batch**.
- In **1. Your students**, type your students, one per line, with their grade or class:
 - Asha Rao, 8
 - Rahul Kumar, Class IX
 - Meera, std 10
- Choose **Add to roster**. Each student appears with their grade; you can change a grade at any time from the list.

Every guide for a student is written at their grade, unless you choose otherwise on a request.

Step 3 — Upload their past tests (if you have them)

This gives Guru each student's starting point. **No past tests? Skip this step:** start with the grades alone, and each student's record begins with their first practice test (Step 6).

- Still on **Review a batch**, in **2. What they all worked**, tick **These are past tests**.
- Type the **Subject** (for example, *Maths*).
- In **3. Their finished pages**, choose **Add files**. Add every past test you have for every student: one file per test. Name each file after the student (*Asha test 1.pdf*, *Rahul unit 3.jpg*) and Guru matches it for you. Check every row; choose the student where Guru could not tell. Next to

each file, put the **date it was taken** if you know it; leave it blank and Guru reads the date from the paper when it is written there, so each student's history is in the right order.

- In **4. Check the cost, then request**, tick the consent box, choose **Upload & check cost**, and then confirm.

Each test becomes its own review, one guide each. Reviews arrive in **My guides**, under each student, usually within minutes; you get an email for each. Each review says what was right, what was missed and why, and ends with a short practice set on exactly what was missed.

Step 4 — See your class

Open **Dashboard**, then **Your class**. For every student you see:

- their grade, and how many tests Guru has reviewed;
- the share of answers they got right, and whether it is improving;
- the ideas they keep missing;
- the next step, one click away.

Below the table, **What the class misses most** lists the ideas more than one student keeps getting wrong: a good topic for the whole class.

Step 5 — Teach the next topic: one guide for each student

- On **Your class**, choose **One topic, a guide for each student**.
- Tick the students (all are ticked to start).
- Type the subject and the topic in a line (for example, *Class VIII — Linear equations in one variable*). If you have the chapter or syllabus pages, add them too: a PDF, photos or a screen recording.
- Choose how many practice questions on each idea (2 to start is right for most).
- Tick the consent box and choose **Make guides**.

Each student gets their own **Prep & Practice Guide**, with their name on it: short lessons, each with a two-minute video, then a practice test printed without answers.

- A student with past tests gets a guide written around the ideas they have missed. One guide each.
- Students at the same grade with no past tests yet **share one guide**: it is made once and charged once, and each student still gets their own copy and their own share link.

The page shows exactly how many guides it will use before you confirm.

Step 6 — Keep the wheel turning

- Give each student their guide: print it, or share it with the **share link** on the guide's page (a passcode protects it).
- When a student has worked the practice test, upload the finished pages on **Review a batch** (leave *These are past tests* unticked, and choose the guide they worked from).
- The review says what is now solid, and ends with the next practice set for exactly what was missed.

That is the Guru Chakra: **Prepare. Practice. Review. Repeat.** Every turn adds to each student's record on **Your class**.

You teach: join the Guru Fellows too

While you set up your class, tick **I'd also like to review other families' guides as a Guru Fellow** on **Review a batch** (or use the card on **Your class**). The application opens with your class's subjects and grades filled in; add your teaching credential and send it. A person reads every application.

As a Guru Fellow you review other families' guides beside the work they came from, and you are paid for each review. You never review your own students' guides: those always go to another Fellow.

What it costs

- **Your first 3 guides are free**, with no card, within 30 days of signing up.
- **For a class, the Academy plan:** \$7 a student a month, with 6 guides for each student, pooled across your students. Extra guides are \$1 each. We arrange it with you by email: write to guru@anveshi.ai.
- **In India:** ₹600 a student a month, with 4 guides each, pooled; extra guides are ₹110; before GST, when payments open.
- **Work out your month** at guru.anveshi.ai/calculator from your students' schedule.

Good to know

- **Any subject, any curriculum.** CBSE, ICSE, IGCSE, IB or your own notes: Guru works from the pages you give it.
- **A very long chapter** comes in parts by topic; you choose which parts to make.
- **Something not right in a guide?** Use **Something not right?** on the guide's page and we fix it.
- **You don't need a Guru Fellow to check your own students' work: you are the teacher in the loop.**
- **A second teacher's eyes, if you want them:** a Guru Fellow can review any guide, or check one question, as a paid option on the guide's page.

Help

Write to guru@anveshi.ai at any time. We read every message.

Team,

Guru.Anveshi.ai

for the eternal seeker in you...
